

SOFTWARE REQUIREMENTS SPECIFICATION (SRS)

Pet Haven – Pet Adoption Center

Frontend-Based Pet Adoption Website

1. Introduction

1.1 Purpose

The purpose of the Pet Haven – Pet Adoption Center project is to design and develop a simple, user-friendly web interface for presenting pets available for adoption and helping visitors understand the adoption process. The system is designed as a college frontend project using HTML and CSS for the static user interface, with JavaScript and React planned for later development phases.

1.2 Project Scope

The website provides information about the adoption center, available pets, adoption requirements, the adoption process, pet-care tips, frequently asked questions, contact information, and an adoption application form.

1.3 Intended Users

- People interested in adopting a pet.
- Visitors looking for information about available pets.
- Pet adoption center staff or administrators in future phases.
- College faculty evaluating the project.

2. Overall Description

2.1 Product Perspective

Pet Haven is a frontend-based website. The current phase focuses on the static user interface. The website is designed so that dynamic JavaScript functionality and a React implementation can be added in later project phases without changing the basic purpose of the system.

2.2 Major Features

- Navigation bar with links to major sections of the website.
- Home section with a main pet image and call-to-action button.
- About Us section describing the adoption center.
- Available Pets section with pet photographs and basic details.
- Why Adopt section explaining the benefits of adoption.
- Adoption Process section showing the steps involved.
- Adoption Requirements section.
- Adoption application form.
- Pet-care tips section.
- Frequently Asked Questions (FAQ) section.
- Contact information and opening hours.
- Footer with navigation links and copyright information.
- Responsive layout for smaller screens.

2.3 Operating Environment

- Web browser such as Google Chrome, Microsoft Edge, or Mozilla Firefox.
- HTML5 and CSS3.
- A code editor such as Visual Studio Code or Notepad.
- Local file system or a web server for hosting.
- GitHub can be used for source-code version control and project hosting.

3. Functional Requirements

ID	Requirement	Description
FR-01	Navigation	The system shall provide navigation links to Home, About, Pets, Adoption Process, Adopt, and Contact sections.
FR-02	Pet Display	The system shall display available pets with photographs, breed, age, gender, personality, vaccination status, and availability.
FR-03	Pet Selection	The system shall provide links/buttons that take the user to the adoption form for a selected pet.
FR-04	Adoption Information	The system shall display adoption requirements and the steps involved in adopting a pet.
FR-05	Adoption Form	The system shall provide fields for name, phone number, email, age, preferred pet, pet type, previous experience, and reason for adoption.
FR-06	Form Input	The system shall allow users to enter text, email, telephone, and number information and select options from radio buttons and a dropdown list.
FR-07	FAQ	The system shall provide expandable FAQ items for common adoption questions.
FR-08	Contact	The system shall display email, phone number, location, and opening hours.
FR-09	Responsive Layout	The system shall adjust the layout for smaller screen sizes using responsive CSS.

4. Non-Functional Requirements

ID	Category	Requirement
NFR-01	Usability	The interface should be simple, readable, and easy to navigate.
NFR-02	Performance	The static website should load efficiently using lightweight HTML, CSS, and image files.
NFR-03	Maintainability	HTML and CSS should be kept in separate files so that content and styling can be updated independently.
NFR-04	Compatibility	The website should work in commonly used modern web browsers.
NFR-05	Responsiveness	The website should remain usable on desktop and smaller screens.
NFR-06	Accessibility	Images should use meaningful alt text and form controls should have clear labels.

5. User Interface Requirements

- The website shall use a consistent pink, cream, white, and dark-gray visual theme.
- The navigation bar shall remain easy to identify and use.
- Pet cards shall display photographs and important pet information clearly.
- Buttons and links shall provide clear visual indication of their purpose.
- The adoption form shall use clearly labelled input controls.
- The footer shall provide basic site information and navigation links.

6. Data Requirements

The current static phase uses sample pet information directly in the HTML. Example pet records include Bruno (Labrador), Lunar (Persian Cat), and Snowball (Rabbit). In future phases, pet information can be moved to JavaScript data structures, a backend, or a database.

6.1 Pet Data

- Pet name
- Breed
- Age
- Gender
- Personality
- Vaccination status
- Availability
- Pet image

7. Technology and Tools

Technology / Tool	Purpose
HTML5	Creates the structure and content of the website.
CSS3	Controls colors, spacing, layout, cards, forms, hover effects, and responsiveness.
JavaScript – Future Phase	Will provide dynamic behavior and client-side interactions.
React – Future Phase	Planned for implementation of the final frontend application.
GitHub	Stores and manages the project source code.

8. Future Scope

- Add JavaScript-based form validation and interactive messages.
- Allow users to filter or search available pets.
- Store adoption applications using a backend/database.
- Add an Admin module for managing pet records.
- Add login/authentication if required in a later phase.
- Convert the frontend into a React-based application.
- Connect the application to an API or database for live pet information.

9. Testing Requirements

- Check that all navigation links open the correct sections.
- Check that all pet images load correctly.
- Check that form fields accept the intended types of input.
- Check that required fields prevent incomplete submission in the browser.
- Check that hover effects work correctly.
- Check that the website remains readable on smaller screens.
- Check the website in at least two modern web browsers.

10. Development Phases

Phase	Planned Work	Technology
Phase 1	Static UI design	HTML + CSS
Phase 2	Dynamic website functionality	JavaScript
Phase 3	Final frontend implementation	React

11. Conclusion

Pet Haven – Pet Adoption Center is a realistic student-level frontend project that provides a clear interface for presenting adoptable pets and collecting adoption-related information. The current implementation focuses on static UI using HTML and CSS. The design and structure provide a suitable foundation for adding JavaScript functionality and React implementation in later phases.
